CONTENTS

EXECUTIVE SUMMARY

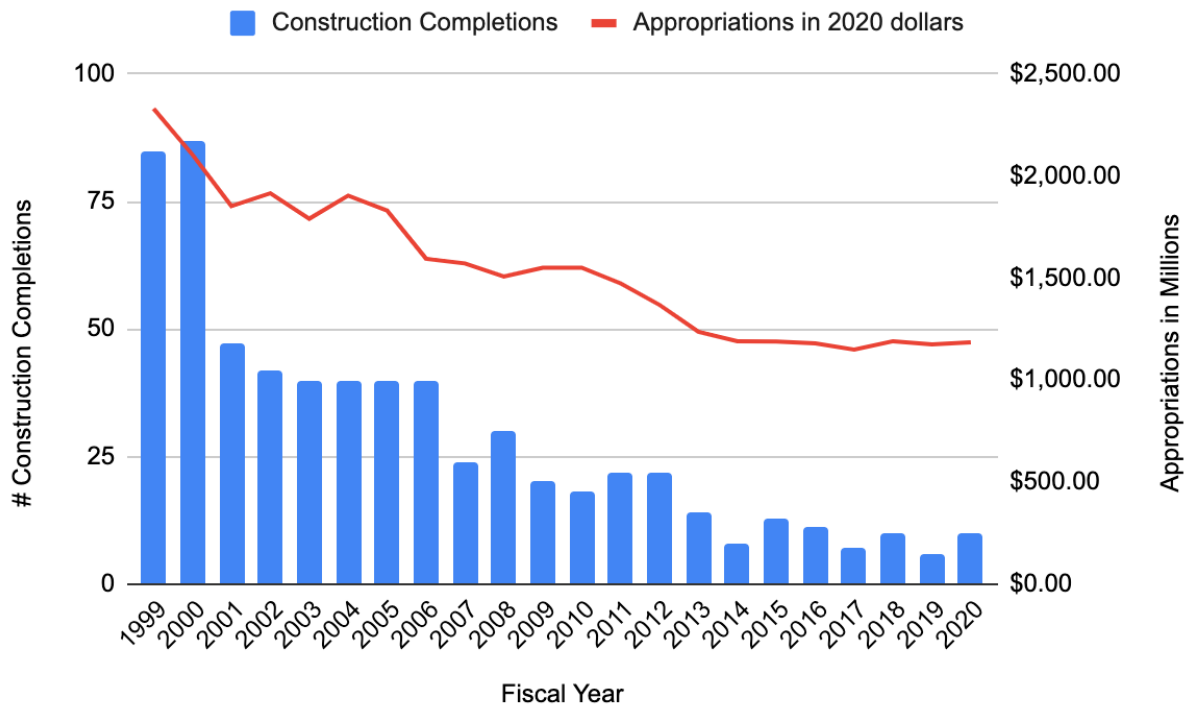
IN 1980, CONGRESS PASSED the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA), informally called Superfund. The Superfund program was given the authority and funds to hold polluters responsible for cleaning up contaminated waste sites or clean up the sites themselves if no responsible party can be found or afford the cleanup.[1] These toxic waste sites house some of the most "hazardous chemicals known to humankind."[2] The Superfund toxic waste program protects people from these contaminants and the serious health problems associated with them.[3]

The program was originally funded by a tax on the chemical and petroleum industries, but that tax expired in 1995, and now the money for the Superfund program has come primarily through appropriations from the general revenue.[4]

As appropriations have decreased over the past two decades, cleanup has slowed, putting more people at risk for longer from hazardous contamination.[5]

- From 1999 to 2020, annual appropriations decreased by more than a billion dollars from $2.3 billion to just under $1.2 billion in constant 2020 dollars.[6,7]
- From 1991 to 2000, when the Superfund Trust was at its highest balance, each year saw an average of 71 Construction Completions.[8] From 2011 - 2020, that number fell to an average of 12 construction completions each year.[9] In FY 2020, construction was completed at only ten sites.[10]
- The Superfund Trust reached its peak balance of $4.7 billion at the start of FY 1997, and then began declining in FY 1998.[11] At the start of FY 2020, the Trust had a balance of $225 million.[12]
- 34 construction projects did not begin in FY 2020 because of a lack of funding.[13]

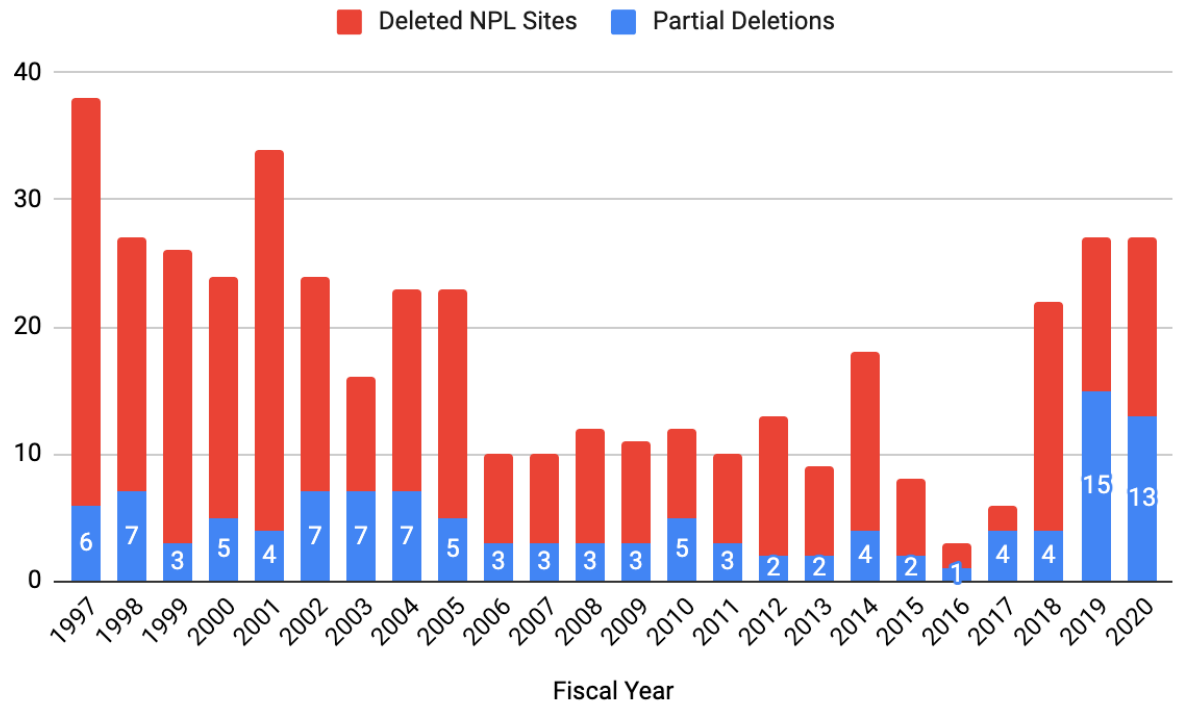
FIGURE 1: CONSTRUCTION COMPLETIONS AND APPROPRIATIONS BY FISCAL YEAR[14]



In FY 2020, the EPA focused on Deletions and Partial Deletions, while the number of cleanup actions remained stagnant or decreased

- From 1997, when the first year Partial Deletions were used, until 2018, the average number of Partial Deletions each year was 4. In FY 2019, there were 15 and in FY 2020, there were 13.[15]
- FY 2019 and 2020 had the highest and second highest number of Partial Deletions in a single fiscal year, respectively.[16]
- Partial Deletions made up nearly half of the total number of combined Deletions and Partial Deletions in 2020. In previous years since the start of Partial Deletions, they have made up an average of less than one-third of the combined total each year.[17]
- 14 Superfund toxic waste sites were deleted from the National Priorities List (NPL) in FY 2020. Aside from 2018, this is the most Superfund National Priorities List deletions to occur in a single fiscal year since 2005.[18]

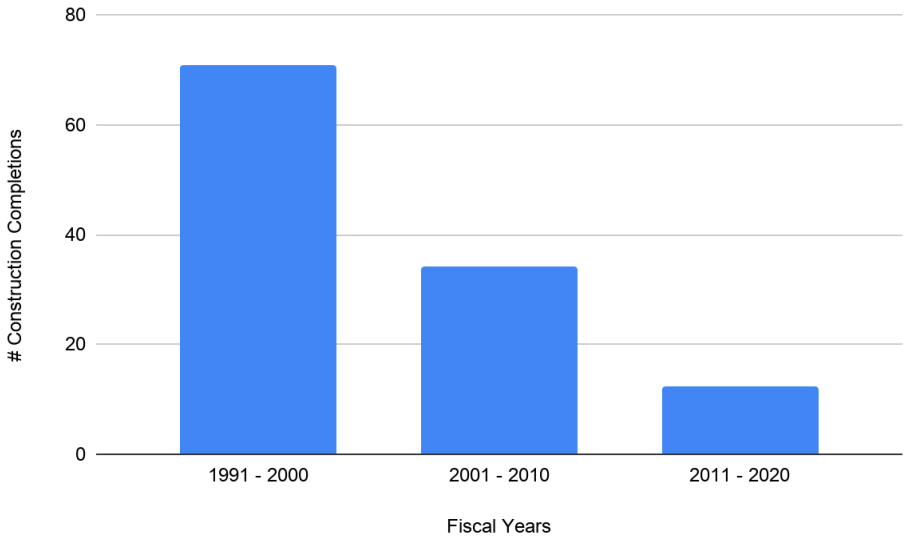
FIGURE 2: PARTIAL DELETIONS AND DELETIONS PER FISCAL YEAR[19]



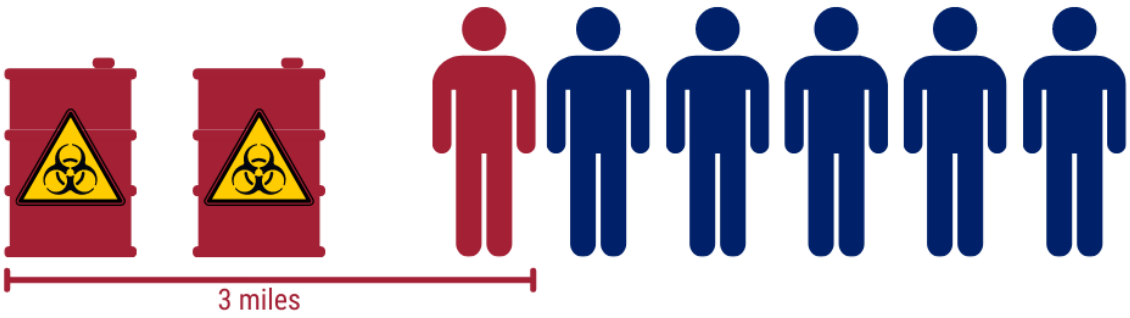
The EPA did not start or complete many cleanup actions in FY 2020 compared to the history of the Superfund program, since the first site was put on the National Priorities List in 1983.[20]

- The number of Construction Completions at National Priorities List sites in FY 2020 dropped two-thirds below the yearly averages since the first National Priorities List.[21]
- Less than half as many Remedy and Final Remedies were selected in FY 2020 compared to the 1983-2019 average of the Superfund program.[22]
- Between 1983 and 2019, there was an average of 54 Superfund toxic waste site Remedial and Final Remedial Actions that began each fiscal year. In FY 2020, there were 24.[23]

FIGURE 3: AVERAGE ANNUAL CONSTRUCTION COMPLETIONS BY 10-YEARS



One in six Americans lives within 3 miles of a proposed or approved Superfund toxic waste site



INTRODUCTION

According to the most recent data available, one in six Americans lives within three miles of a toxic waste site that is so dangerous it has been proposed or approved for cleanup under the federal Superfund program.[24,25] The majority of these sites are on the National Priorities List run by the EPA's toxic waste cleanup program, often referred to as Superfund.[26] Less than a quarter of the more than 1,700 sites that have been added to the list since it was created in 1980 have been deleted, which is the final step in confirming all cleanup goals have been achieved at the site.[27,28]

The EPA Superfund program began in 1980 when Congress passed the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). The bill gave the EPA the authority and funds to identify hazardous sites, which threaten public health; hold the polluting parties responsible for cleanup; and clean up the sites themselves if no Potentially Responsible Parties (PRPs) could be determined. The program is referred to as Superfund, because of the Superfund Trust that was created to fund the program.

The Superfund program has been used to respond to natural disasters and emergencies including the attack on the World Trade Center, the BP Oil Spill, Hurricane Katrina, and the 2001 Anthrax attack.[29] Contaminants of concern at toxic waste sites on the National Priorities List include arsenic, lead, mercury, benzene, dioxin, and other hazardous chemicals[30] that may increase the risk of cancer, reproductive problems, birth defects, and other serious illnesses.[31]

Definitions

The EPA provides the definitions for a variety of cleanup actions. Each definition in the following section uses the exact definition provided by the EPA on the Superfund webpage. Definitions of cleanup actions are listed in the order they generally occur.

National Priorities List (NPL): The National Priorities List (NPL) is the list of sites of national priority among the known releases or threatened releases of hazardous substances, pollutants, or contaminants throughout the United States and its territories.[32]

Contaminants of Concern (COCs): COCs are the chemical substances found at the site that EPA has determined pose an unacceptable risk to human health or the environment. These are the substances evaluated by EPA to be addressed by cleanup actions at the site.[33]

Sediment: Sediment is materials found at the bottom of a water body. Sediments may include clay, silt, sand, gravel, decaying organic matter, and shells.[34]

Preliminary Assessment: The preliminary assessment (PA) involves gathering historical and other available information about site conditions to evaluate whether the site poses a threat to human health and the environment and/or whether further investigation is needed. The preliminary assessment also helps identify sites that may need immediate or short-term response actions.[35]

Site Inspection: The site investigation (SI) tests air, water, and soil at the site to determine what hazardous substances are present and whether they are being released to the environment and are a threat to human health.[36]

Information about the site that is collected in the PA/SI phase helps EPA to evaluate the risks posed by the site using its Hazard Ranking System (HRS).[37]

Hazardous Ranking Score: The Hazard Ranking System (HRS) is the principal mechanism that the EPA uses to place uncontrolled waste sites on the National Priorities List (NPL). It is a numerically based screening system that uses information from initial, limited investigations - the preliminary assessment (PA) and the site inspection (SI) - to assess the relative potential of sites to pose a threat to human health or the environment. Sites with HRS scores of 28.5 or greater are eligible for placement on the NPL.[38]

Removal Action: Removal responses are common at Superfund Sites when the contamination poses an immediate threat to human health and the environment. Removals are classified as either emergency, time-critical, or non-time-critical depending on the extent and type of contamination.[39]

Remedial Investigation: The remedial investigation (RI) serves as the mechanism for collecting data to characterize site conditions, determine the nature of the waste, assess risk to human health and the environment, and conduct treatability testing to evaluate the potential performance and cost of the treatment technologies that are being considered.[40]

Feasibility Study: The feasibility study (FS) is the mechanism for the development, screening, and detailed evaluation of alternative remedial actions.[41]

Record of Decision: The ROD explains which cleanup alternatives will be used at NPL sites. It contains information on site history, site description, site characteristics, community participation, enforcement activities, past and present activities, contaminated media, the contaminants present, description of the response actions to be taken, and the remedy selected for cleanup. The development of the ROD also includes consideration of how the site could be used in the future.[42]

Remedial Design: Remedial design (RD) is the phase in Superfund site cleanup where the technical specifications for cleanup remedies and technologies are designed.[43]

Remedial Action: Remedial action (RA) follows the remedial design phase. It involves the actual construction or implementation phase of Superfund site cleanup. The RD/RA is based on the specifications described in the Record of Decision.[44]

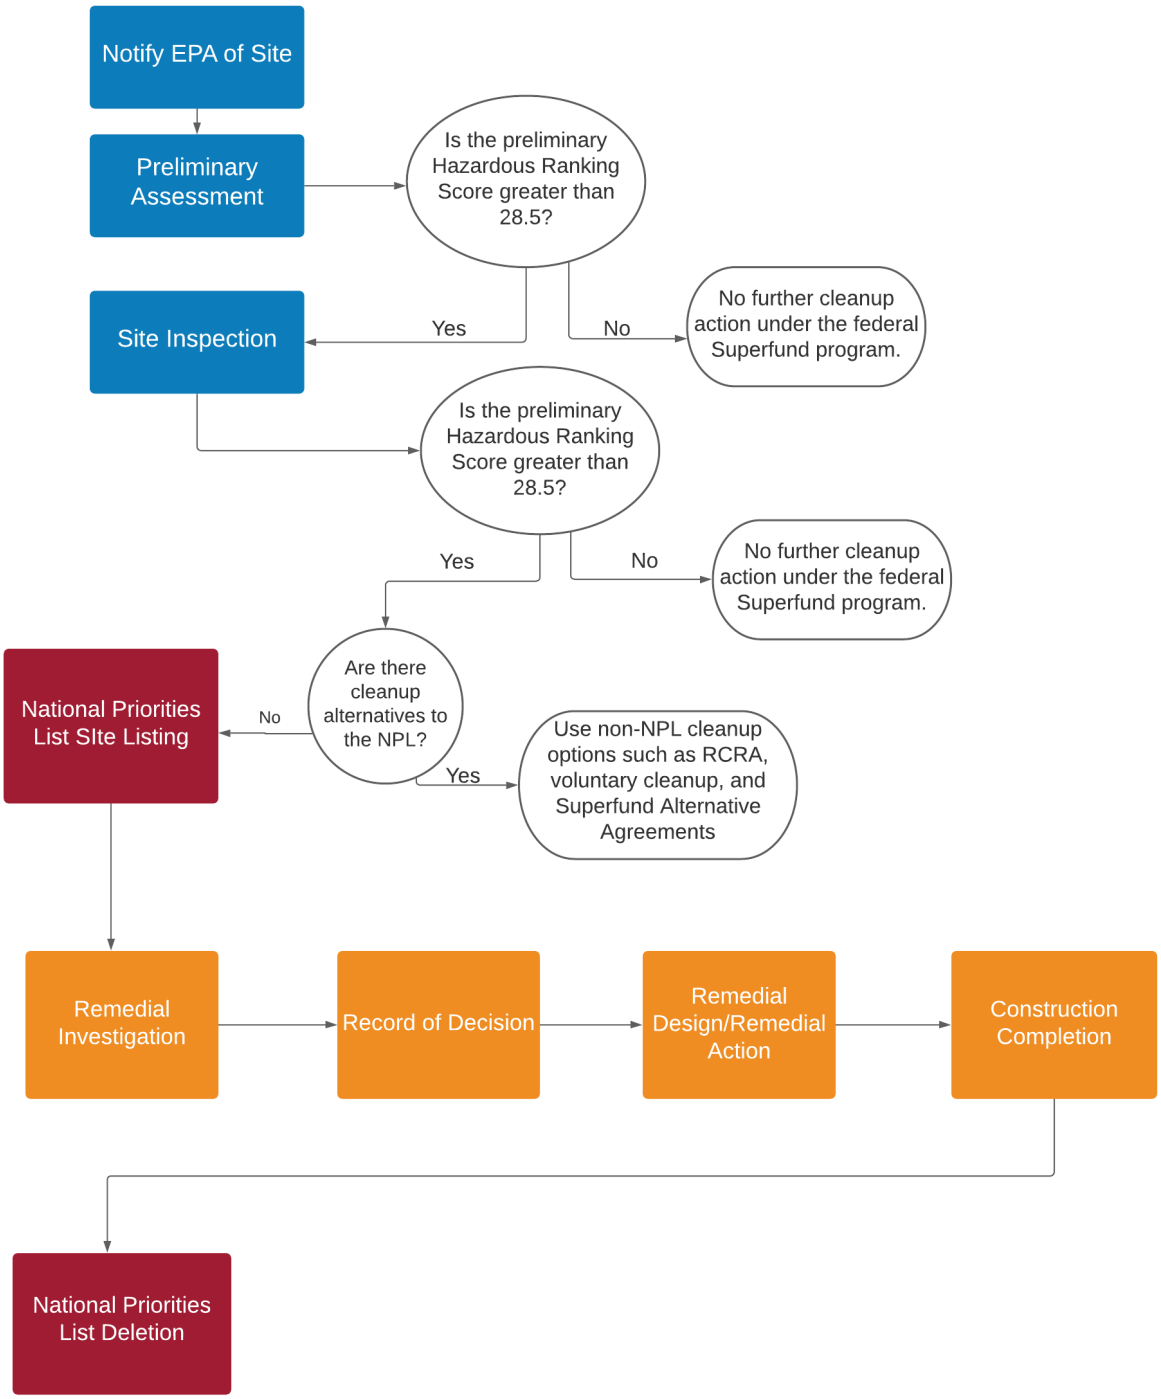
Construction Completion: This milestone indicates all physical construction required for the cleanup of the entire site has been completed (even though final cleanup levels may not have been achieved). For example, a groundwater treatment system has been constructed though it may need to operate for a number of years in order for all contaminants to be removed from the groundwater.[45]

Partial Deletion: Sites, or portions of sites, that meet the standard provided in the National Oil and Hazardous Substances Pollution Contingency Plan (NCP), i.e., no further response is appropriate, may be the subject of entire or partial deletion.[46] Such portion may be a defined geographic unit of the site, perhaps as small as a residential unit, or may be a specific medium at the site, e.g., groundwater, depending on the nature or extent of the release(s).[47]

National Priorities List Deletion: EPA may delete a final NPL site if it determines that no further response is required to protect human health or the environment. Sites that have been deleted from the NPL remain eligible for further Superfund-financed remedial action in the unlikely event that conditions in the future warrant such action.[48]

Superfund Cleanup Process

FIGURE 4: STEPS FOR A SUPERFUND NPL SITE FROM IDENTIFICATION TO DELETION



The cleanup of a Superfund site can take a decade or more.[49] Anyone -- citizens, state agencies, and EPA regional offices -- can bring the EPA's attention to a site.[50] Next, the EPA conducts a preliminary assessment and site inspection to evaluate the threat level of the site.[51] During the preliminary assessment, the EPA investigates any available background information on the site, and if it continues to warrant further investigation, the EPA will do a site inspection to test the water, soil, and air for contamination.[52,53] The sites that pose the most danger to human health are placed on the National Priorities List.[54]

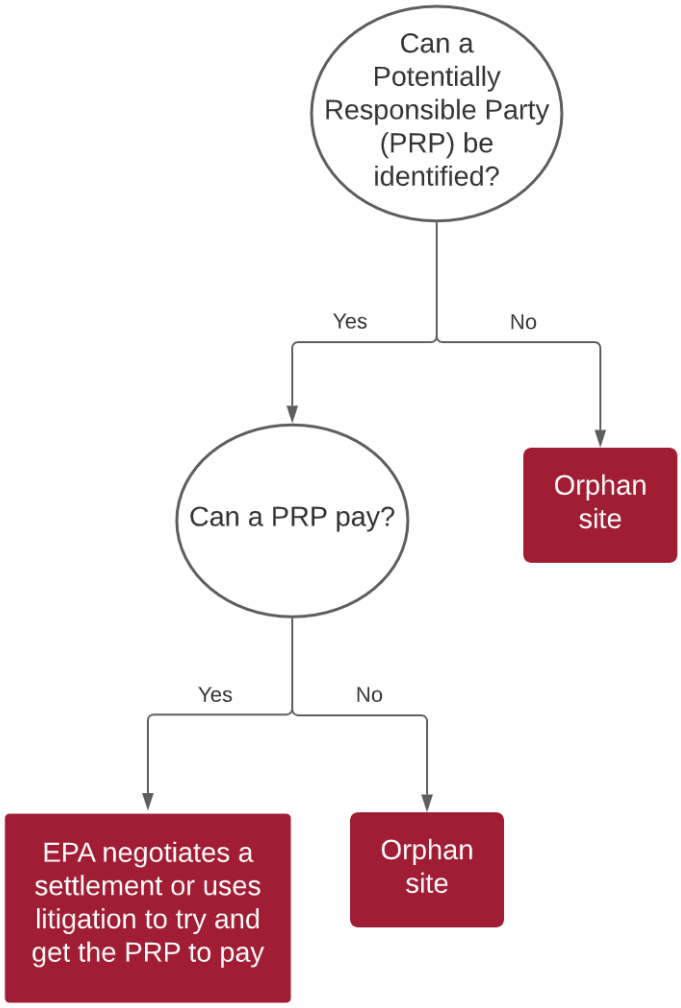
During the preliminary assessment and site inspection, the EPA also determines what type of cleanup action is necessary at the site or if no cleanup is necessary. The two types of cleanup at a Superfund toxic waste site are removal and remedial action.[55] Removal actions are usually short-term cleanup actions which involve the removal of contaminants that pose a present danger to human health.[56] Removal actions might include removing hazardous substances from a site, fencing the area to limit human access, providing an alternative water supply to local residents, or relocating residents.[57] Remedial actions are typically long-term cleanup actions aimed at permanently and significantly reducing contamination. The most hazardous sites that require long-term clean up action are referred to the National Priorities List.[58] The first step for a site on the National Priorities List is to conduct a remedial investigation and feasibility study, which evaluates the type and extent of contamination, cost of cleanup, and technologies that may be used. All information collected about the site is then used to inform the Record of Decision (ROD).[59] The Record of Decision describes the history and characteristics of the site, details of the type and extent of the contamination, and the plan for cleaning it up.[60]

Following the Record of Decision, the design of the cleanup and implementing the cleanup plan occur in the Remedial Design and Remedial Action stage.[61] Once the physical work to complete the cleanup plan is complete, the site reaches the Construction Completed milestone.[62] Once construction is complete, however, contaminants may still remain on-site, as the remedy continues to operate. For example, it may take many years after a groundwater treatment begins for all the contaminated groundwater to be treated, even though the construction of the treatment operation is complete. Or, the construction plan may need to be revised based on later investigations of the extent of the contamination and effectiveness of the remediation plan. Once construction is complete, additional monitoring may continue during the Post-Construction Completion phase in order to ensure that the remedy selected continues to be effective.[63] The final step is NPL Deletion, which occurs when the EPA is certain that all cleanup actions are complete and all cleanup goals have been achieved.[64]

How the Superfund Toxic Waste Cleanup Program is Funded

There are two ways that the cleanup of a Superfund toxic waste site is funded. The first is when a Potentially Responsible Party (PRP) of a site is identified and can pay for the cleanup.[65] A Potentially Responsible Party can be any individual, organization, or company, which contributed in any way to the contamination at the site.[66] The EPA aims to have PRPs pay for or conduct the cleanup of the site and will try to negotiate a cleanup agreement with the PRP to clean up the site.[67] Alternatively, the EPA may pay to clean up a site and then try to have the PRP pay back the cost.[68]

FIGURE 5: SUPERFUND TOXIC WASTE PROGRAM FUNDING



At facilities that are owned or operated by a federal entity, such as a department or agency of the United States, the cleanup is paid for by the federal department or agency responsible, and not the Superfund Trust.[69] As of December 2020, federal Superfund sites make up approximately 12% of National Priorities List sites.[70]

When a PRP cannot be identified or cannot afford the cleanup, the EPA pays for the cleanup from the Superfund Trust.[71] When the Superfund program was established, the Trust was funded by a tax on the chemical and oil industries. That tax expired in 1995, and shortly after the Trust reached its peak of $4.7 billion at the start of FY 1997, it began declining.[72] Now, the Trust is primarily funded through taxpayer dollars.[73]

Since 1999, federal appropriations have decreased from approximately $2.3 billion to less than $1.2 billion.[74] In FY 2020, the federal government appropriated $1,184,755,000 to the Superfund program.[75]

I IMPORTANCE OF CLEANING UP SUPERFUND SITES

Human Health and Safety

Exposure to chemicals at Superfund toxic waste sites is linked to an increased risk of cancer; respiratory and heart disease; stunted development in children; and many other medical problems.[76] People living in areas with a higher number of Superfund sites have been found to have higher incidences of cancer than those not living near Superfund sites.[77]

People can be exposed to contaminants from air emissions, eating fish that have absorbed toxic substances from the contaminated sediment and water, eating food grown in contaminated soil,[78] and drinking or swimming in contaminated water.[79]

Children are particularly vulnerable to developing adverse health effects in early childhood or even before they're born if their mothers are exposed to harmful contaminants from a Superfund site.[80]

Environment

Even once the danger to human health from a toxic waste site is under control, damage to the environment may be irreversible. The hazardous substances at Superfund sites can kill and cause reproductive problems in organisms, and endanger the survival of ecosystems.[81]

At some sites, no action will be taken even if there are adverse ecological effects occurring or expected to occur because cleanup at the site is suspected to cause more long-term damage to the environment.[82] For example, if an ecosystem is fragile, removing contaminated soil may physically destroy the habitat and cause more damage than leaving the contamination in place.[83,84]

An Urgent Problem: The Threat of Worsening Natural Disasters to Superfund Sites

Hurricanes, floods, and sea-level rise threaten to sweep toxic chemicals from Superfund sites into nearby communities,[85] and more severe hurricanes are becoming more frequent.[86]

Although the total number of tropical cyclones each year has remained steady, the average intensity of tropical

cyclones is increasing, meaning that we will see the average storm become more severe in the coming years.[87] Further, climate change has led to an increase in the proportion of tropical cyclones each year that are considered higher intensity (Category 4 and Category 5),[88] which are those responsible for the "great majority of [tropical cyclone]-related damage and mortality."[89] Hurricane Floyd (1999), Hurricane Katrina (2005), Hurricane Irene (2011), Hurricane Sandy (2012), and Hurricane Harvey (2017) have all caused flooding at Superfund sites.[90] The record-breaking 2020 hurricane season only emphasized how this threat continues to grow, with the most named-storms to ever occur in the Atlantic hurricane season.[91]

As our climate changes, at least 800 Superfund toxic waste sites are at risk of extreme flooding in the next 20 years,[92] which could spread the toxic pollution into nearby communities.[93] In 2019, the U.S. Government Accountability Office found that almost 40 percent of National Priorities List (NPL) sites overlap with the Federal Emergency Management Agency's list of top flood hazard regions.[94]

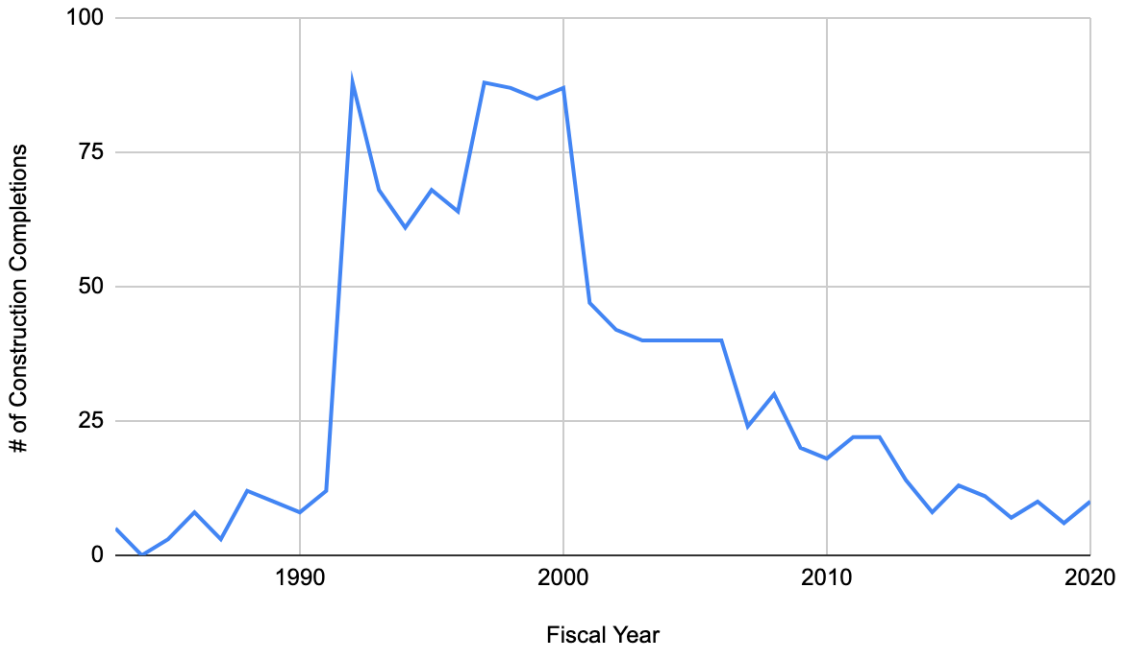
In 2017, the Trump Administration reversed an executive order issued during the previous administration, requiring risks from flooding to be taken into account when building and rebuilding infrastructure,[95] including Superfund sites, which receive federal funds.[96] We can expect this to increase the chance that we will implement a cleanup plan that fails to keep people safe from contamination, and that it will require additional funding and time when it does.

THE SUPERFUND PROGRAM'S DECLINING BUDGET AND SUCCESS

1. In FY 2020, construction was completed at less than a third as many sites than the yearly average in the history of the Superfund program, continuing the decades-long trend of decreasing numbers of yearly Construction Completions.[97]

From 1991 to 2000, when the Superfund Trust was its highest balance, an average of 71 sites saw Construction Completion each year. In 2001 through 2010, the average dropped to 34. In 2011 through 2020, that number dropped further to 12. Construction was completed at 10 sites in FY 2020. This number increased from 6 sites in FY 2019, which was the lowest number of Construction Completions since 1987.

FIGURE 6: CONSTRUCTION COMPLETIONS PER FISCAL YEAR



While NPL Deletion and Partial Deletion can largely be a matter of waiting for the site to reach cleanup goals after construction is complete,[98] which may take decades,[99] the Construction Completed milestone reflects the culmination of physical cleanup work.[100]

The 10 sites where Construction Completion was achieved in FY 2020 are:[101]

- Jet Propulsion Laboratory (NASA), Pasadena, CA
- Spectron, Inc., Elkton, MD
- MIDCO II, Gary, IN
- PJP Landfill, Jersey City, NJ
- Ashland/Northern States Power Lakefront, Ashland, WI
- Corozal Well, Corozal, PR
- Fairfax St. Wood Treaters, Jacksonville, FL
- Blackburn and Union Privileges, Walpole, MA
- Red Panther Chemical Company, Clarksdale, MS
- Coast Wood Preserving, Ukiah, CA

One of these sites, the Jet Propulsion Laboratory, is a federal site,[102] which means it is owned or operated by a federal government entity, and that entity pays for the cleanup.[103] Of the nine non-federal sites listed above, seven had Potentially Responsible Parties (PRPs) involved in some aspect of the cleanup, which means at least some of the cost of cleanup was done or paid for by a Potentially Responsible Party.[104]

The decades-long trend of declining Construction Completions correlates with the decreased amount of yearly appropriations to the program. From 1999 to 2020, annual appropriations decreased by more than a billion dollars from $2.3 billion to just under $1.2 billion in constant 2020 dollars.[105,106] Accordingly, the average number of yearly Construction Completions fell by approximately half each decade from 1999 through 2020.[107]

2. The total number of Partial and full Deletions from the National Priorities List exceeds the historical average (1997-2019) by nearly 10.

There were more National Priorities List Deletions in 2020 compared to the annual average over the previous twenty years.[108]

14 Superfund toxic waste sites were deleted from the National Priorities List in the fiscal year 2020.[109] Aside from 2018, this is the most Superfund National Priorities List deletions to occur in a single fiscal year since 2005.[110]

The sites deleted from the National Priorities List in FY 2020 are:[111]

- American Crossarm & Conduit Co., Chehalis, WA
- Annapolis Lead Mine, Annapolis, MO
- Cimarron Mining Corp., Carrizozo, NM

- Fridley Commons Park Well Field, Fridley, MN
- JASCO Chemical Corp., Mountain View, CA
- Northside Landfill, Spokane, WA
- Red Panther Chemical Company, Clarksdale, MS
- Tulsa Fuel and Manufacturing, Collinsville, OK
- Scrap Processing Co., Inc., Medford, WI
- FMC Corp. (Dublin Road Landfill), Town of Shelby, NY
- Hormigas Ground Water Plume, Caguas, PR
- Dup. County Landfill/Blackwell Forest, Warrenville, IL
- First Piedmont Corp. Rock Quarry (Route 719), Pittsylvania County, VA
- Fairfax St. Wood Treaters, Jacksonville, FL

Eight of the above 14 sites had a PRP to pay for a part of the cleanup.[112] The other six were paid for out of the EPA Superfund budget.

There were more Partial Deletions in FY 2020 compared to the average annual number in the years since the first site had a Partial Deletion[113]

The main success of the Superfund program in FY 2020 compared to previous years was the number of sites that had Partial Deletions from the National Priorities List.

In 1995, the EPA introduced Partial Deletions as a new measure to evaluate the success of the Superfund program and the first Partial Deletion occurred in 1997.[114,115] The Partial Deletion rule allows for part of a site, whether that be a geographic section or a medium of contamination, such as groundwater, to be deleted from the NPL before the rest of the site can be deleted.[116] Those portions of the site deleted under the Partial Deletion rule must meet all deletion criteria, which means that no further response action is necessary to clean up the site.[117]

FY 2020 and FY 2019 both saw a marked increase in the number of Partial Deletions. From FY 1997, the first year a site had a Partial Deletion, until FY 2018, there was a yearly average of 4 Partial Deletions per year.[118] In FY 2019 and FY 2020, there were 15 and 13 Partial Deletions, respectively.[119]

Nearly half the combined total of Partial and full Deletions in FY 2020 come from Partial Deletions, whereas in previous years, Partial Deletions have been, on average, a little more than a fifth of the combined total.[120]

It is important to note that NPL Deletion and Partial Deletion is a step that comes after years, and often decades, of cleanup.[121] However, it can be an important step in order to redevelop the land and indicate to the community or to investors that an area is ready for use.[122,123]

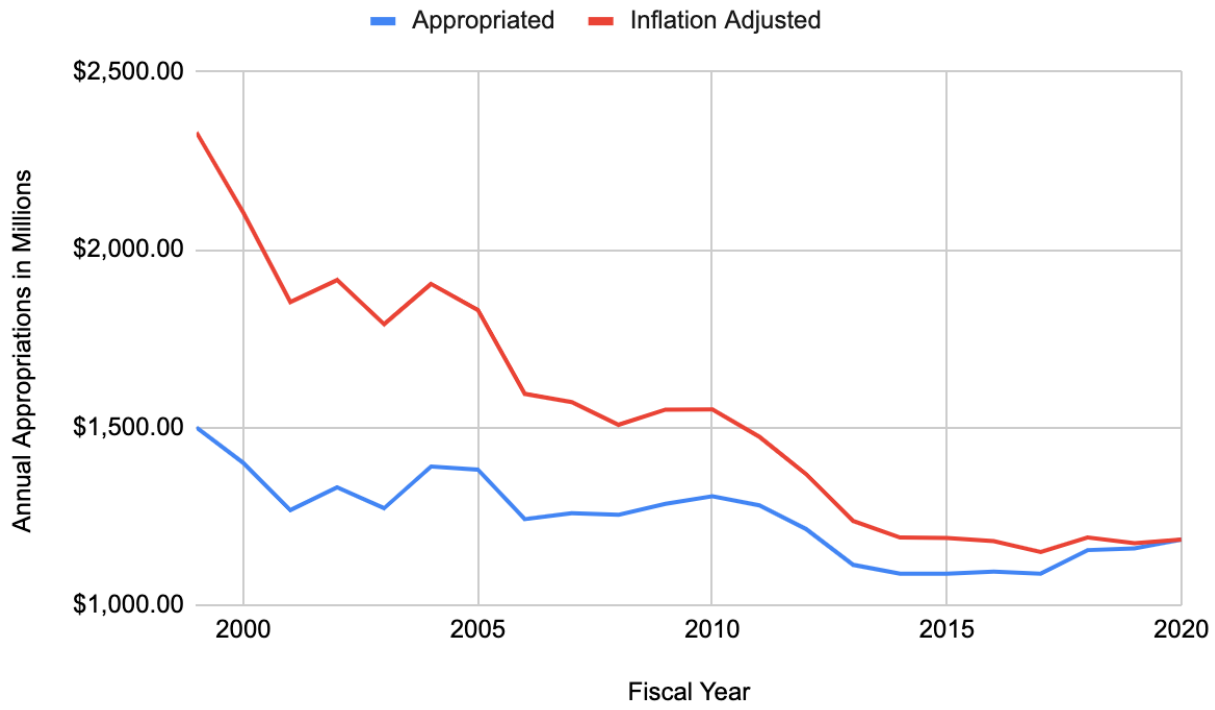
4. The declining Superfund budget has slowed down the cleanup of toxic waste sites

In a 2013 report, the Government Accountability Office found that from

1999 through 2013, annual federal appropriations to Superfund declined from approximately $2.3 billion to $1.2 billion (adjusted to 2020 dollars).[124] In 2020, the Superfund program was appropriated nearly $1.2 billion dollars.[125]

As annual Superfund federal appropriations decreased between 1999 and 2013, the program's spending on new remedial cleanup projects also declined.[126] The EPA prioritizes ongoing cleanup work, and thus, approximately one-third of new remedial action projects were delayed at non-federal Superfund sites from 1999 through 2013 due to the decline in funding.[127]

FIGURE 7: ENACTED FEDERAL APPROPRIATIONS TO THE SUPERFUND PROGRAM IN NOMINAL AND CONSTANT 2020 DOLLARS FROM 1999 THROUGH 2020*[128]



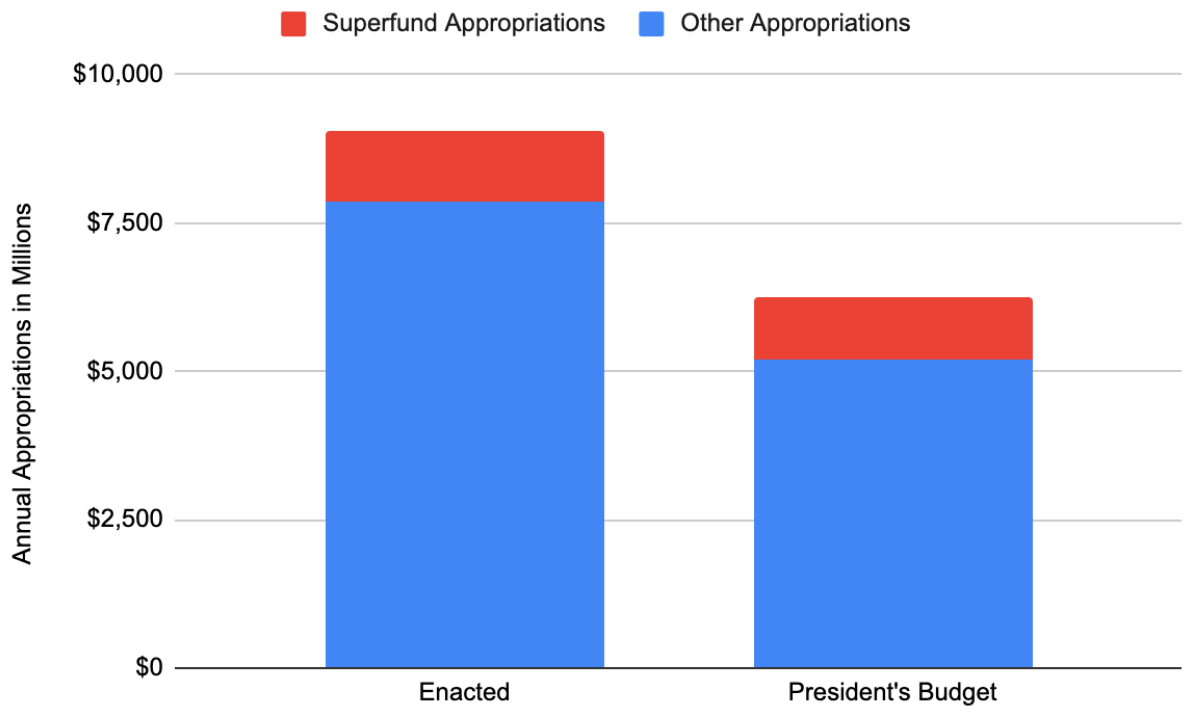
*For 2020, the number is estimated enacted, because the enacted appropriation amount is not yet finalized as of this report release.

5. The federal budget proposed for FY 2020 by the President would have appropriated $114 million less to Superfund than in FY 2019,[129] but the enacted budget was approximately $25 million more.[130]

President Trump made Superfund a cornerstone of his Environmental Protection Agency (EPA) agenda,[131] but the President's budget proposal in FY 2020 included a cut to the Environmental Protection Agency by nearly a third,[132] which would include cutting Superfund appropriations by approximately $114 million.[133] However, the estimated enacted appropriations in FY 2020 included $207 million more to the EPA and $25 million more to the Superfund program than in FY 2019. [134]

The following graph shows the President's Budget for FY 2020 versus enacted appropriations. Under the FY 2020 President's Budget, the Superfund toxic waste program is not cut drastically compared to the entire EPA budget, but it does take up a larger percentage of the EPA's budget, which is in-line with President Trump's emphasis on revitalizing the Superfund toxic waste program.[135]

FIGURE 8: PRESIDENT'S BUDGET VS ESTIMATED ENACTED SUPERFUND AND OTHER EPA APPROPRIATIONS[136]



The President's Budget for FY 2020 had Superfund receive approximately 20% of total EPA appropriations. However, the actual percentage of Superfund appropriations of the total EPA budget in FY 2020 was 13%, which is the same percent as in FY 2019.[137]

6. In FY 2020, 34 construction projects did not begin because of a lack of funding[138]

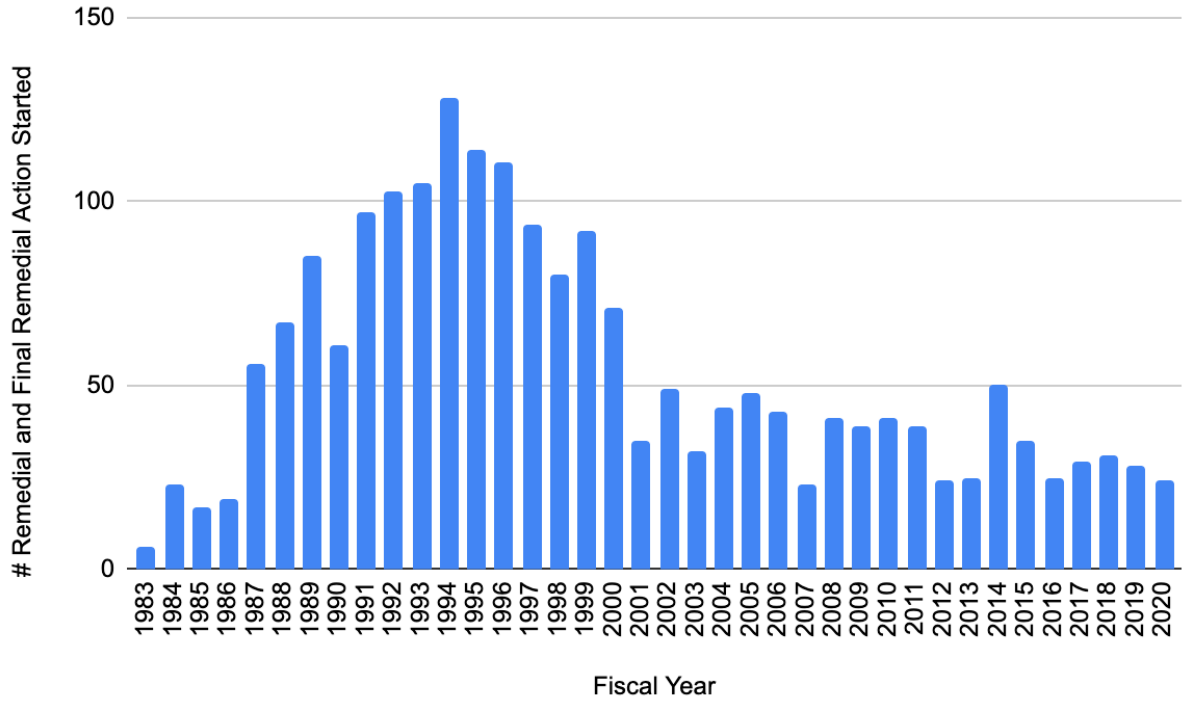
The budget shortfall has delayed construction at sites that would otherwise have been ready to be cleaned up at 34 sites,[139] which is the largest backlog of sites in 15 years.[140]

Because the EPA prioritizes ongoing cleanup over beginning new cleanup projects,[141] declining funds have slowed down the number of sites at which cleanup begins.[142]

7. FY 2020 had less than half the number of combined Remedial and Final Remedial Actions Started than the average annual number from 1983, the first year a site was listed on the NPL, through 2019.[143]

Between 1983 and 2019, there was an average of 54 Superfund toxic waste site Remedial and Final Remedial Actions that began each fiscal year. In FY 2020, there were 24.

FIGURE 9: REMEDIAL AND FINAL REMEDIAL ACTION STARTED BY FISCAL YEAR[144]

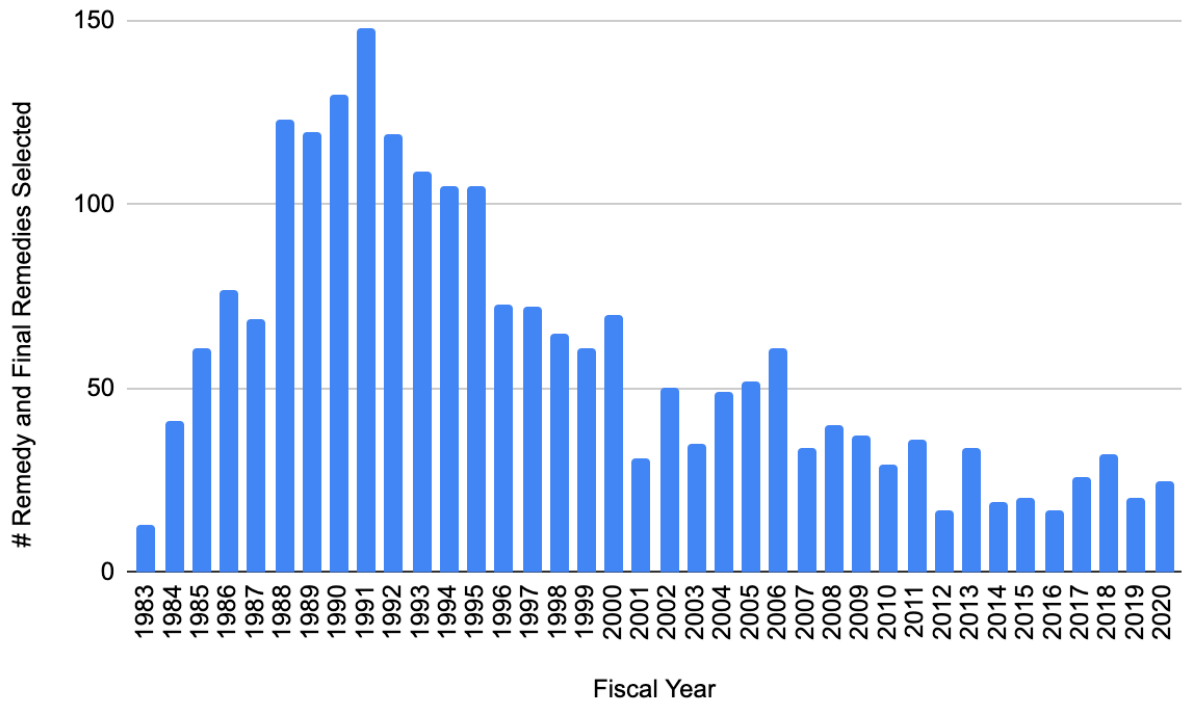


8. Less than half as many Remedy and Final Remedies were selected in FY 2020 compared to the annual average history of the Superfund program since the first site was listed on the National Priorities List through 2019.[145]

Response actions at a toxic waste site can include short-term removal actions and long term-remedial cleanup actions.[146] The remedial cleanup action begins after the remedy is designed and selected.[147] Sometimes, due to new information, an additional remedy will be selected and is referred to as a Final Remedy. The Final Remedy Selected is issued in the last Record of Decision given for a site, which the EPA believes will best remediate the site.[148]

From the fiscal years 1983 through 2019, an average of 59 Remedy and Final Remedies were selected. In FY 2020, there were 25.

FIGURE 10: REMEDY AND FINAL REMEDIES SELECTED BY FISCAL YEAR



9. Human exposure is not under control at 122 sites and the EPA has insufficient data to determine if human exposure is under control at another 130 sites.[149]

Human exposure is considered not under control at a site when the possible pathways of exposure from the contamination to a person have not been sufficiently mitigated such that a person could become exposed to one or more of the contaminants at the site.[150]

Some examples of efforts by the EPA to get human exposure under control are installing a fence around the site and warning signs around contaminated waterways to warn the public to avoid swimming or fishing in the affected areas.[151] People should follow all EPA posted warnings and contact the Site Manager if they have further questions about possible exposure pathways from a specific Superfund toxic waste site.

10. The Administrator's Emphasis List has led to faster cleanup at the sites included on the list. The list has not led to faster cleanup overall across NPL sites.

In May 2017, the former EPA Administrator, Scott Pruitt, commissioned a Superfund Task Force to provide recommendations "for improving and expediting site cleanups and promoting redevelopment."[152] In July 2017, the task force produced a list of recommendations, including the creation of a Top Ten Administrator's Emphasis List of sites that need "immediate and intense attention."[153]

The first Administrator's Emphasis List released in 2017 included 17 sites on the National Priorities List, one site under consideration to be proposed and three sites proposed to the National Priorities List.[154] The latest release of the Administrator's Emphasis List in FY 2020 was August 2020, which has 14 sites listed, including proposed and listed NPL sites, as well as some sites that are not on the National Priorities List.[155] Nine sites on the current Administrator's Emphasis List are sites that were on the original list.[156]

In FY 2020, the EPA reported it would focus resources on the Administrator's Emphasis List.[157] The following sites currently on the list have seen additional cleanup actions in FY 2020:

- Two sites on the Administrator's List in 2020 and on the original Administrator's Emphasis List received Partial Deletions: U.S.S. Smelter and Lead site and the Silver Bow Creek/Butte Area site.[158]
- The Federal District Court of Montana approved a consent decree to secure more than $150 million in cleanup actions for the Silver Bow Creek/Butte Area site from Atlantic Richfield Company.[159]
- The Orange County North Basin site was finalized on the National Priorities List.[160]

- The EPA approved Potentially Responsible Parties (PRPs) to begin further investigation of the Olin Chemical site.[161]

None of the sites at which construction was completed in FY 2020 have been or are currently on the Administrator's Emphasis List.[162] This may reflect the choice of sites to include on the Emphasis List as those requiring dedicated, long-term action to reach the point of Construction Completed.

While the Administrator's Emphasis List is a useful tool for directing resources to specific sites, it does not address the larger lack of resources that slows down the cleanup of toxic waste sites.

CONCLUSION AND RECOMMENDATIONS

The Superfund toxic waste cleanup program protects the health and safety of our communities.[163]

The declining Superfund toxic waste program budget over the past 20 years has decreased the EPA's ability to clean up toxic waste sites, which is reflected in the budget and success of the program in 2020.

Recommendations for Congress

Congress needs to take action to support the Superfund toxic waste cleanup program, including the following:

A Polluter Pays Tax should be reinstated to fund the Superfund.

The EPA Superfund toxic waste program's limited financial resources slow down cleanup and make the process more costly as the EPA attempts to spread limited resources across more than 1,300 toxic waste sites.[164] In order to protect human health and safety, the Superfund toxic waste program needs additional funding, which should come from the polluting industries responsible for the contamination, not the public.

Recommendations for the EPA

The EPA needs to take action to better prepare for natural disasters hindering cleanup efforts:

The risk of toxic waste spreading from a Superfund site due to climate-induced natural disasters and sea-level rise should be taken into account when designing the cleanup plan for a site.

In October 2019, the Government Accountability Office (GAO) came out with a report urging the EPA, and specifically the Superfund program, to take additional actions to manage the risk from climate change.[165] They found that 945 Superfund toxic waste sites are in areas that may be impacted by climate change effects such as wildfires, flooding, hurricanes, and sea-level rise.[166] In the GAO report, they recommended that the EPA "clarify how its actions to manage risks at nonfederal NPL sites from potential impacts of climate change align with current goals and objectives." However, the 2018-2022 EPA Strategic Plan included no mention of climate change. The EPA's lack of clarification on the necessity to manage risks from climate change in accordance with its goals of a cleaner, healthier environment fails to

"ensure that officials consistently integrate climate change information into site-level risk assessments and risk response decisions." The EPA's Strategic Plan must be revised to include the importance of considering the threat of contamination spilling from a toxic waste site due to the effects of climate change.

Recommendations for local & state governments

Local and state governments need to take action to protect the health and safety of the communities they serve:

States and local governments should work closely with the EPA to ensure people are aware of the Superfund sites in their communities.

States and local governments have a responsibility to raise public awareness about the threats of toxic waste sites by utilizing state and local government resources.

Recommendations for individuals

Individuals need to take action to protect their own health and safety:

Individuals should find out if they live near a Superfund toxic waste site.

53 million Americans live within 3 miles of a toxic waste site proposed or designated for cleanup under the Superfund program and many don't know it.[167] The chemicals at Superfund toxic waste sites can increase the risk of cancer, respiratory and heart problems, and other serious illnesses. The EPA may issue warnings to not swim or fish in areas near a Superfund toxic waste site due to possible contamination, and individuals should adhere to all warnings.

Find out if you live near a Superfund toxic waste site here: https://www.epa.gov/superfund/search-superfund-sites-where-you-live

METHODOLOGY

Definitions

See section 3: Introduction, subsection 1: Definitions, p. 8.

Measuring Success of the Superfund Toxic Waste Cleanup Program

The EPA Superfund toxic waste cleanup program utilizes a variety of different measurements to evaluate its success in a given year. The EPA reports on the number of National Priorities List (NPL) site Deletions, Partial Deletions, Construction Completions, sites Proposed to the NPL, and sites added to the NPL each fiscal year.[168]

The EPA does not publish data for the annual number of Initial Assessment Completed, Remedy and Final Remedy Selected, or Remedial and Final Remedial Action Started actions. The EPA releases total "Remedial Action Project Completions" which includes multiple cleanup actions, but only up to fiscal year 2018 right now and not by Site Milestone.[169] The dates of each of the above Site Milestones are available on the webpage for each individual site under Cleanup Progress. This report used the Scrape Storm web scraper to extract that information for each individual site.

The sites scraped included Proposed, Listed, Deleted, and Superfund Alternative Approach sites in order to get the most complete picture of cleanup actions completed by the EPA toxic waste cleanup program each fiscal year. Superfund Alternative Approach sites are still managed under the Superfund program, though they are not included on the National Priorities List. Once the EPA determines that a site qualifies for inclusion on the NPL, a potentially responsible party may negotiate to clean up the site but not have it listed on the NPL.[170]

The web scraper was not able to scrape seven of these sites.[171] These sites did not have a Cleanup Progress section and are not included in the number of Remedy and Final Remedy Selected, or Remedial and Final Remedial Action Started in this report. These sites report a variety of different cleanup metrics that are not consistent with how cleanup is measured at other sites reviewed, and are therefore not included in order to maintain consistency in how the data is collected and reported.

Not every site reports on all of the same measures under the Cleanup Progress section of the site's webpage. For

example, some sites only have Final Remedy Selected and not a date included for Remedy Selected, which is why this report uses the combined number of Remedy and Final Remedy selected for each year and the same for Remedial and Final Remedial Action Started.

Potentially Responsible Parties and Orphan Sites

The funding to clean up a Superfund toxic waste site can come from a potentially responsible party (PRP), state and federal funds, or a combination of federal, state, and PRP funding.

Orphan sites are Superfund toxic waste sites where a PRP cannot be identified or cannot afford the cleanup.[172] In these cases, funding for the cleanup comes from the EPA Superfund budget, which is primarily funded by appropriations from the general revenue fund.[173] In addition, states must pay 10% of the cost of cleanup at sites paid for by the federal Superfund program.[174]

Orphan sites in this report adhere to the definition provided by the EPA, which are all those in which no PRP was able to fund the cleanup. The EPA does not aggregate the number of orphan sites and the number of sites with viable PRPs, nor does it uniformly state this information on the background webpage for each Superfund site. Therefore, we defined orphan sites as ones that had no PRP conduct any cleanup action.

Calculating Yearly Federal Appropriations

This report looks at the success of the EPA Superfund toxic waste cleanup program in the fiscal year 2020. We use the fiscal year, because it determines the program's budget, and the size of the budget has a significant impact on the success of the program year-to-year. The 2020 fiscal year ran from October 1, 2019 through September 30, 2020.[175]

To determine yearly federal appropriations, we relied on the EPA's annual Budget in Brief report. Each year, the President releases their budget proposal to Congress, which outlines how much they would like to appropriate to each agency.[176] The EPA's annual Budget in Brief report outlines how much the President has suggested to spend on each of the EPA's programs, including the Superfund program.[177] Ultimately, the amount the EPA is appropriated and the amount of those appropriations that go to the Superfund program depend on Congressional budget decisions for the fiscal year.[178] Then the following year, the EPA Budget in Brief includes the amount estimated to have been enacted in the previous fiscal year and the final amount enacted in the year before that.

In this report, we specifically used the Summary of Agency Resources by Appropriation section of the Budget in Brief report. A portion of the funds appropriated each year to the Superfund program are funds that are ultimately transferred to the Office of

the Inspector General and the Office of Science & Technology to do work for the Superfund program. The total amount appropriated to the Superfund program each year used in this report is the amount of money appropriated to the Superfund program before the transfers to the Office of Inspector General and the Office of Science and Technology. The Office of Inspector General provides audit, evaluation, and investigative services for the Superfund program and the Office of Science and Technology conducts research and development activities for the Superfund program.[179] For years 1999 and 2000, there was no Summary of Agency Resources by Appropriation section in the Budget in Brief report. Instead the Trust Fund appendix was used for the number appropriated to the Superfund budget in those two years.

APPENDIX: Superfund National Priorities List Toxic Waste Sites by State

ALASKA

Number of sites: 6
Alaska has the 46th most Superfund toxic waste sites in the country and the same number of Superfund toxic waste sites as one other U.S. state, territory, and Washington D.C.

Number of sites with human exposure under control: 3
Sites with insufficient data: 3
Sites with human exposure not under control: 0

Number of sites with groundwater migration under control: 3
Sites with insufficient data: 3
Sites with groundwater migration not under control: 0

Table of National Priorities List sites in Alaska:

Site Name	City	Human Exposure Under Control	Groundwater Migration Under Control	Cleanup Complete	Site-wide Ready for Anticipated Use
Adak Naval Air Station	Adak	Yes	Yes	No	No
Eielson Air Force Base	Fairbanks	Yes	Insufficient Data	Yes	No
Elmendorf Air Force Base	Anchorage	Insufficient Data	Insufficient Data	No	No
Fort Richardson (USArmy)	Anchorage	Insufficient Data	Yes	Yes	No
Fort Wainwright	Fort Wainwright	Insufficient Data	Insufficient Data	Yes	No
Salt Chuck Mine	Thorne Bay	Yes	Yes	No	No

ALABAMA

Number of sites: 12
Alabama has the 38th most Superfund toxic waste sites in the country and the same number of toxic waste sites as four other U.S. states, territories, and Washington D.C.

Number of sites with human exposure under control: 11
Sites with insufficient data: 1
Sites with human exposure not under control: 0

Number of sites with groundwater migration under control: 10
Sites with insufficient data: 0
Sites with groundwater migration not under control: 1
Sites that are not groundwater sites: 1

Table of National Priorities List sites in Alabama:

Site Name	City	Human Exposure Under Control	Groundwater Migration Under Control	Cleanup Complete	Site-wide Ready for Anticipated Use
Alabama Army Ammunition Plant	Childersburg	Insufficient Data	Yes	No	No
Alabama Plating Company, Inc.	Vincent	Yes	Yes	Yes	Yes
American Brass Inc.	Headland	Yes	Yes	Yes	Yes
Anniston Army Depot (Southeast Industrial Area)	Anniston	Yes	Yes	No	No
Ciba-Geigy Corp. (Mcintosh Plant)	Mcintosh	Yes	Yes	Yes	Yes
Interstate Lead Co. (Ilco)	Leeds	Yes	Yes	Yes	No
Olin Corp. (Mcintosh Plant)	Mcintosh	Yes	Yes	No	No
Stauffer	Bucks	Yes	Yes	No	No

Chemical Co. (Cold Creek Plant)					
Stauffer Chemical Co. (Lemoyne Plant)	Axis	Yes	Yes	No	No
T.H. Agriculture & Nutrition Co. (Montgomery Plant)	Montgomery	Yes	Yes	Yes	Yes
Triana/Tennessee River	Limestone/Morgan	Yes	Not a Groundwater Site	Yes	No
USArmy/NASA Redstone Arsenal	Huntsville	Yes	No	No	No

AMERICAN SAMOA

Number of sites: 0

ARKANSAS

Number of sites: 9
Arkansas has the 42nd most Superfund toxic waste sites in the country and the same number of Superfund toxic waste sites as one other U.S. state, territory, and Washington D.C.

Number of sites with human exposure under control: 8
Sites with insufficient data: 1
Sites with human exposure not under control: 0

Number of sites with groundwater migration under control: 7
Sites with insufficient data: 2
Sites with groundwater migration not under control: 0

Table of National Priorities List sites in Arkansas:

Site Name	City	Human Exposure Under Control	Groundwater Migration Under Control	Cleanup Complete	Site-wide Ready for Anticipated Use
Arkwood, Inc.	Omaha	Yes	Yes	Yes	Yes
Cedar Chemical Corporation	West Helena	Insufficient Data	Insufficient Data	No	No
Macmillan Ring Free Oil	Norphlet	Yes	Insufficient Data	No	No
Mid-south Wood Products	Mena	Yes	Yes	Yes	Yes
Midland Products	Ola/Birta	Yes	Yes	Yes	Yes
Mountain Pine Pressure Treating	Plainview	Yes	Yes	Yes	Yes
Ouachita Nevada Wood Treater	Reader	Yes	Yes	Yes	No
Popile, Inc.	El Dorado	Yes	Yes	Yes	Yes
Vertac, Inc.	Jacksonville	Yes	Yes	Yes	No

ARIZONA

Number of sites: 9
Arizona has the 42nd most Superfund toxic waste sites in the country and the same number of Superfund toxic waste sites as one other U.S. state, territory, and Washington D.C.

Number of sites with human exposure under control: 7
Sites with insufficient data: 1
Sites with human exposure not under control: 1

Number of sites with groundwater migration under control: 5
Sites with insufficient data: 0
Sites with groundwater migration not under control: 4

Table of National Priorities List sites in Arizona:

Site Name	City	Human Exposure Under Control	Groundwater Migration Under Control	Cleanup Complete	Site-wide Ready for Anticipated Use
Apache Powder Co.	Saint David	Yes	Yes	Yes	Yes
Hassayampa Landfill	Arlington	Yes	Yes	Yes	Yes
Indian Bend Wash Area	Scottsdale	Yes	Yes	Yes	Yes
Iron King Mine - Humboldt Smelter	Dewey-humboldt	No	Yes	No	No
Motorola, Inc. (52nd Street Plant)	Phoenix	Insufficient Data	No	No	No
Phoenix-goodyear Airport Area	Goodyear	Yes	No	No	No
Tucson International Airport Area	Tucson	Yes	No	No	No
Williams Air Force Base	Chandler	Yes	No	No	No
Yuma Marine Corps Air Station	Yuma	Yes	Yes	Yes	Yes

CALIFORNIA

Number of sites: 97
California has the 2nd most Superfund toxic waste sites of any state, territory, or Washington D.C. in the country.

Number of sites with human exposure under control: 69
Sites with insufficient data: 17
Sites with human exposure not under control: 11

Number of sites with groundwater migration under control: 54
Sites with insufficient data: 10
Sites with groundwater migration not under control: 25
Sites that are not groundwater sites: 7
Sites that are not yet designated: 1

Table of National Priorities List sites in California:

Site Name	City	Human Exposure Under Control	Groundwater Migration Under Control	Cleanup Complete	Site-wide Ready Anticipated Use
Advanced Micro Devices, Inc.	Sunnyvale	No	Yes	Yes	No
Advanced Micro Devices, Inc. (Building 915)	Sunnyvale	Yes	Yes	Yes	Yes
Aerojet General Corp.	Rancho Cordova	Yes	No	No	No
Alameda Naval Air Station	Alameda	Yes	Yes	No	No
Alark Hard Chrome	Riverside	Yes	No	No	No
Amco Chemical	Oakland	Yes	No	No	No
Applied Materials	Santa Clara	Yes	Yes	Yes	Yes
Argonaut Mine	Jackson	No	Not a Groundwater Site	No	No
Atlas Asbestos Mine	Coalinga	Yes	Not a Groundwater Site	Yes	Yes
Barstow Marine Corps Logistics Base	Barstow	Yes	Yes	No	No

Beckman Instruments (Porterville Plant)	Porterville	Yes	Yes	Yes	Yes
Blue Ledge Mine	Rogue River-siskiyou Nf	Insufficient Data	Not a Groundwater Site	No	No
Brown & Bryant, Inc. (Arvin Plant)	Arvin	Yes	No	No	No
Camp Pendleton Marine Corps Base	Camp Pendleton	Yes	Yes	No	No
Casmalia Resources	Casmalia	Yes	Yes	No	No
Castle Air Force Base (6 Areas)	Merced	Yes	Yes	Yes	Yes
Coast Wood Preserving	Ukiah	Yes	Yes	Yes	Yes
Concord Naval Weapons Station	Concord	Yes	No	No	No
Cooper Drum Co.	South Gate	Yes	No	No	No
Copper Bluff Mine	Hoopa	No	Not yet designated	No	No
Crazy Horse Sanitary Landfill	Salinas	Yes	Yes	No	No
Cts Printex, Inc.	Mountain View	Yes	Yes	Yes	Yes
Del Amo	Los Angeles	Yes	No	No	No
Edwards Air Force Base	Edwards Afb	Insufficient Data	Yes	No	No
El Toro Marine Corps Air Station	El Toro	Yes	Yes	No	No
Fairchild Semiconductor Corp. (Mountain View Plant)	Mountain View	Insufficient Data	No	Yes	No
Fairchild Semiconductor Corp. (South San Jose Plant)	San Jose	Yes	Yes	Yes	Yes
Fort Ord	Marina	No	Yes	No	No
Fresno Municipal Sanitary Landfill	Fresno	Yes	No	No	No
Frontier Fertilizer	Davis	Yes	Insufficient Data	Yes	No

George Air Force Base	Victorville	Yes	Yes	No	No
Halaco Engineering Company	Oxnard	Insufficient Data	Insufficient Data	No	No
Hewlett-packard (620-640 Page Mill Road)	Palo Alto	Yes	Insufficient Data	Yes	Yes

VERMONT

Number of sites: 12
Vermont has the 38th most Superfund toxic waste sites in the country and the same number of Superfund toxic waste sites as four other U.S. states, territories, and Washington D.C.

Number of sites with human exposure under control: 10
Sites with insufficient data: 2
Sites with human exposure not under control: 0

Number of sites with groundwater migration under control: 9
Sites with insufficient data: 3
Sites with groundwater migration not under control: 0

Table of National Priorities List sites in Vermont:

Site Name	City	Human Exposure Under Control	Groundwater Migration Under Control	Cleanup Complete	Site-wide Ready for Anticipated Use
Bennington Municipal Sanitary Landfill	Bennington	Yes	Yes	Yes	Yes
Bfi Sanitary Landfill (Rockingham)	Rockingham	Yes	Yes	Yes	Yes
Burgess Brothers Landfill	Woodford	Yes	Yes	Yes	Yes
Commerce Street Plume	Williston	Yes	Yes	No	No
Elizabeth Mine	Strafford	Yes	Yes	No	No
Ely Copper Mine	Vershire	Yes	Insufficient Data	No	No
Jard Company, Inc.	Bennington	Insufficient Data	Insufficient Data	No	No
Old Springfield Landfill	Springfield	Yes	Yes	Yes	Yes

Parker Sanitary Landfill	Lyndon	Yes	Yes	Yes	Yes
Pike Hill Copper Mine	Corinth	Insufficient Data	Insufficient Data	No	No
Pine Street Canal	Burlington	Yes	Yes	Yes	Yes
Pownal Tannery	Pownal	Yes	Yes	Yes	Yes

VIRGINIA

Number of sites: 30
Virginia has the 16th most Superfund toxic waste sites of any U.S. state, territory, or Washington D.C.

Number of sites with human exposure under control: 26
Sites with insufficient data: 1
Sites with human exposure not under control: 3

Number of sites with groundwater migration under control: 16
Sites with insufficient data: 11
Sites with groundwater migration not under control: 3

Table of National Priorities List sites in Virginia:

Site Name	City	Human Exposure Under Control	Groundwater Migration Under Control	Cleanup Complete	Site-wide Ready for Anticipated Use
Abex Corp.	Portsmouth	Yes	Yes	No	No
Arrowhead Associates, Inc./Scovill Corp.	Montross	Yes	Yes	Yes	No
Atlantic Wood Industries, Inc.	Portsmouth	No	Yes	No	No
Avtex Fibers, Inc.	Front Royal	Yes	Yes	Yes	Yes
Buckingham County Landfill	Buckingham	Yes	Yes	Yes	No
C & R Battery Co., Inc.	Chesterfield County	Yes	Yes	Yes	Yes
Chisman Creek	York County	Yes	Yes	Yes	Yes
Culpeper Wood Preservers, Inc.	Culpeper	No	Insufficient Data	No	No
Defense General Supply Center (Dla)	Chesterfield County	Yes	Yes	No	No
Former Nansemond Ordnance Depot	Suffolk	Yes	Insufficient Data	No	No

Fort Eustis (Us Army)	Newport News	Yes	Insufficient Data	No	No
Greenwood Chemical Co.	Newtown	Yes	Yes	Yes	Yes
H & H Inc., Burn Pit	Farrington	Yes	Yes	Yes	Yes
Hidden Lane Landfill	Sterling	Yes	Yes	No	No
Kim-stan Landfill	Selma	Yes	Yes	Yes	Yes
L.A. Clarke & Son	Spotsylvania	Yes	No	No	No
Langley Air Force Base/Nasa Langley Research Center	Hampton	Yes	Insufficient Data	No	No
Marine Corps Combat Development Command	Quantico	Yes	Insufficient Data	No	No
Naval Amphibious Base Little Creek	Virginia Beach	Yes	Yes	Yes	Yes
Naval Surface Warfare Center - Dahlgren	Dahlgren	Yes	Insufficient Data	No	No
Naval Weapons Station - Yorktown	Yorktown	Yes	Insufficient Data	No	No
Norfolk Naval Base (Sewells Point Naval Complex)	Norfolk	Yes	Insufficient Data	Yes	Yes
Norfolk Naval Shipyard	Portsmouth	Yes	Insufficient Data	No	No

Peck Iron And	Portsmouth	No	No	No	No

Metal					
Rentokil, Inc. (Virginia Wood Preserving Division)	Richmond	Yes	Yes	Yes	Yes
Saltville Waste Disposal Ponds	Saltville	Yes	No	No	No
Saunders Supply Co.	Chuckatuck	Yes	Yes	Yes	Yes
St. Juliens Creek Annex (U.S. Navy)	Chesapeake	Yes	Insufficient Data	Yes	Yes
U.S. Titanium	Piney River	Yes	Yes	Yes	Yes

WASHINGTON

Number of sites: 46
Washington has the 8th most Superfund toxic waste sites of any U.S. state, territory, or Washington D.C.

Number of sites with human exposure under control: 33
Sites with insufficient data: 4
Sites with human exposure not under control: 9

Number of sites with groundwater migration under control: 28
Sites with insufficient data: 6
Sites with groundwater migration not under control: 11
Sites that are not groundwater sites: 1

Table of National Priorities List sites in Washington:

Site Name	City	Human Exposure Under Control	Groundwater Migration Under Control	Cleanup Complete	Site-wide Ready for Anticipated Use
American Lake Gardens/Mcchord AFB	Tacoma	Yes	Yes	Yes	Yes
Bangor Naval Submarine Base	Silverdale	Yes	Yes	Yes	Yes
Bangor Ordnance Disposal (USNavy)	Bremerton	Yes	Yes	Yes	Yes
Boomsnub/Airco	Vancouver	Yes	Yes	No	No
Bremerton Gasworks	Bremerton	No	No	No	No
Centralia Municipal Landfill	Centralia	Yes	Yes	Yes	Yes
Colbert Landfill	Spokane	Yes	Yes	Yes	No
Commencement Bay, Near Shore/Tide Flats	Tacoma	No	Insufficient Data	No	No
Commencemen	Tacoma	Yes	Yes	Yes	No

t Bay, South Tacoma Channel					
Fairchild Air Force Base (4 Waste Areas)	Spokane	Yes	Insufficient Data	No	No
Fmc Corp. (Yakima)	Yakima	Yes	Yes	Yes	Yes
Fort Lewis Logistics Center	Tillicum	Yes	Yes	Yes	Yes
General Electric Co. (Spokane Apparatus Service Shop)	Spokane	Yes	Yes	Yes	Yes
Grain Handling Facility At Freeman	Freeman	Yes	No	No	No
Greenacres Landfill	Spokane County	Yes	Yes	Yes	Yes
Hamilton/Labre e Roads Gw Contamination	Chehalis	No	No	No	No
Hanford 100-area (USDOE)	Benton County	Yes	No	No	No
Hanford 200-area (Usdoe)	Benton County	Yes	No	No	No
Hanford 300-area (Usdoe)	Benton County	Yes	Yes	No	No
Harbor Island (Lead)	Seattle	No	Yes	No	No
Hidden Valley Landfill (Thun Field)	Pierce County	Yes	Yes	Yes	Yes
Jackson Park Housing Complex (USNavy)	Kitsap County	Yes	Yes	No	No
Kaiser Aluminum (Mead Works)	Mead	Yes	Yes	No	No
Lakewood	Lakewood	Yes	Yes	Yes	Yes

Lockheed West Seattle	Seattle	Yes	Not a Groundwater Site	No	No
Lower Duwamish Waterway	Seattle	No	No	No	No
Makah Reservation Warmhouse Beach Dump	Neah Bay	Insufficient Data	Yes	No	No
Mica Landfill	Mica	Yes	Yes	Yes	Yes

Midway Landfill	Kent	Yes	Yes	Yes	Yes
Moses Lake Wellfield Contamination	Moses Lake	Insufficient Data	Insufficient Data	No	No
Naval Air Station, Whidbey Island (Ault Field)	Whidbey Island	Yes	No	Yes	Yes
Naval Undersea Warfare Engineering Station (4 Waste Areas)	Keyport	Insufficient Data	No	Yes	No
North Market Street	Spokane	Yes	Yes	Yes	Yes
Oeser Co.	Bellingham	Yes	Yes	Yes	No
Old Navy Dump/Manchester Laboratory (Usepa/Noaa)	Manchester	Yes	Yes	Yes	Yes
Pacific Car & Foundry Co.	Renton	Yes	Yes	Yes	No
Pacific Sound Resources	Seattle	Yes	Yes	Yes	Yes
Palermo Well Field Ground Water Contamination	Tumwater	No	Insufficient Data	Yes	No
Pasco Sanitary	Pasco	Yes	Yes	No	No

Landfill					
Puget Sound Naval Shipyard Complex	Bremerton	No	Insufficient Data	Yes	No
Queen City Farms	Maple Valley	Yes	Yes	Yes	Yes
Quendall Terminals	Renton	No	No	No	No
Seattle Municipal Landfill (Kent Highlands)	Kent	Yes	No	Yes	Yes
Western Processing Co., Inc.	Kent	Yes	Yes	Yes	No
Wyckoff Co./Eagle Harbor	Bainbridge Island	No	No	No	No

WEST VIRGINIA

Number of sites: 10
West Virginia has the 40th most Superfund toxic waste sites of any U.S. state, territory, or Washington D.C.

Number of sites with human exposure under control: 7
Sites with insufficient data: 3
Sites with human exposure not under control: 0

Number of sites with groundwater migration under control: 5
Sites with insufficient data: 3
Sites with groundwater migration not under control: 2

Table of National Priorities List sites in West Virginia:

Site Name	City	Human Exposure Under Control	Groundwater Migration Under Control	Cleanup Complete	Site-wide Ready for Anticipated Use
Allegany Ballistics Laboratory (USNavy)	Mineral County	Yes	Yes	No	No
Big John Salvage - Hoult Road	Fairmont	Yes	No	No	No
Fike Chemical, Inc.	Nitro	Yes	Insufficient Data	No	No
Hanlin-Allied-olin	Moundsville	Insufficient Data	No	No	No
North 25th Street Glass And Zinc	Clarksburg	Insufficient Data	Insufficient Data	No	No
Ravenswood Pce	Ravenswood	Yes	Yes	Yes	Yes
Shaffer Equipment/Arbuckle Creek Area	Minden	Insufficient Data	Insufficient Data	No	No
Sharon Steel Corp (Fairmont Coke Works)	Fairmont	Yes	Yes	No	No
Vienna	Vienna	Yes	Yes	Yes	Yes

Tetrachloroethene					
West Virginia Ordnance (USArmy)	Point Pleasant	Yes	Yes	No	No

WISCONSIN

Number of sites: 35
Wisconsin has the 13th most Superfund toxic waste sites of any U.S. state, territory, or Washington D.C.

Number of sites with human exposure under control: 33
Sites with insufficient data: 0
Sites with human exposure not under control: 2

Number of sites with groundwater migration under control: 31
Sites with insufficient data: 3
Sites with groundwater migration not under control: 0
Sites that are not groundwater sites: 1

Table of National Priorities List sites in Wisconsin:

Site Name	City	Human Exposure Under Control	Groundwater Migration Under Control	Cleanup Complete	Site-wide Ready for Anticipated Use
Algoma Municipal Landfill	Algoma	Yes	Yes	Yes	Yes
Amcast Industrial Corporation	Cedarburg	No	Insufficient Data	No	No
Ashland/Northern States Power Lakefront	Ashland	Yes	Yes	Yes	No
Better Brite Plating Co. Chrome And Zinc Shops	De Pere	Yes	Yes	Yes	Yes
City Disposal Corp. Landfill	Dunn	Yes	Yes	Yes	Yes
Delavan Municipal Well #4	Delavan	Yes	Yes	Yes	Yes
Hagen Farm	Stoughton	Yes	Yes	Yes	Yes
Hechimovich Sanitary Landfill	Williamstown	Yes	Insufficient Data	Yes	No
Hunts Disposal	Caledonia	Yes	Yes	Yes	Yes

Landfill					
Janesville Ash Beds	Janesville	Yes	Yes	Yes	Yes
Janesville Old Landfill	Janesville	Yes	Yes	Yes	Yes
Kohler Co. Landfill	Kohler	Yes	Yes	Yes	Yes
Lauer I Sanitary Landfill	Menomonee Falls	Yes	Yes	Yes	Yes
Lemberger Landfill, Inc.	Whitelaw	Yes	Yes	Yes	Yes
Lemberger Transport & Recycling	Franklin Township	Yes	Yes	Yes	Yes
Madison Metropolitan Sewerage District Lagoons	Blooming Grove	Yes	Not a Groundwater Site	Yes	Yes
Master Disposal Service Landfill	Brookfield	Yes	Yes	Yes	Yes
Mid-state Disposal, Inc. Landfill	Cleveland Township	Yes	Yes	Yes	Yes
Moss-american Co., Inc. (Kerr-Mcgee Oil Co.)	Milwaukee	Yes	Yes	Yes	Yes
Muskego Sanitary Landfill	Muskego	Yes	Yes	Yes	Yes
N.W. Mauthe Co., Inc.	Appleton	Yes	Yes	Yes	Yes
National Presto Industries, Inc.	Eau Claire	Yes	Yes	Yes	Yes
Oconomowoc Electroplating Co., Inc.	Ashippun	Yes	Yes	Yes	Yes
Onalaska Municipal Landfill	Onalaska	Yes	Yes	Yes	No
Penta Wood	Daniels	Yes	Yes	Yes	Yes

Products					
Refuse Hideaway Landfill	Middleton	Yes	Yes	Yes	Yes
Ripon City Landfill	Fond Du Lac County	Yes	Insufficient Data	Yes	No
Sauk County Landfill	Excelsior	Yes	Yes	Yes	Yes
Schmalz Dump	Harrison	Yes	Yes	Yes	Yes
Sheboygan Harbor & River	Sheboygan	No	Yes	Yes	No
Spickler Landfill	Spencer	Yes	Yes	Yes	Yes
Stoughton City Landfill	Stoughton	Yes	Yes	Yes	Yes
Tomah Municipal Sanitary Landfill	Tomah	Yes	Yes	Yes	Yes
Waste Management Of Wisconsin, Inc. (Brookfield Sanitary Landfill)	Brookfield	Yes	Yes	Yes	No
Wausau Ground Water Contamination	Wausau	Yes	Yes	Yes	No

WYOMING

Number of sites: 1
Wyoming has the 53rd most Superfund toxic waste sites in the country and the same number of Superfund toxic waste sites as three other U.S. states, territories, and Washington D.C.

Number of sites with human exposure under control: 1
Sites with insufficient data: 0
Sites with human exposure not under control: 0

Number of sites with groundwater migration under control: 1
Sites with insufficient data: 0
Sites with groundwater migration not under control: 0

Table of National Priorities List sites in Wyoming:

Site Name	City	Human Exposure Under Control	Groundwater Migration Under Control	Cleanup Complete	Site-wide Ready for Anticipated Use
F.E. Warren Air Force Base	Cheyenne	Yes	Yes	No	No

[93] See note 70.

[94] 45% of all non-federal sites are located in areas with FEMA's highest flood hazard category: U.S. Government Accountability Office, *SUPERFUND: EPA Should Take Additional Actions to Manage Risks from Climate Change*, October 2019, p. 20, accessed January 27, 2021 at https://www.gao.gov/assets/710/702158.pdf

As of September 2019, when the G.A.O. report listed above cites the number of Superfund sites, there were 1,179 non-federal sites.

Environmental Protection Agency, Superfund: National Priorities List (NPL), archived September 18, 2019 https://web.archive.org/web/20190918222115/https://www.epa.gov/superfund/superfund-national-priorities-list-npl

45% of 1,179 sites is 45% × 1,179 = 530.55.

The total number of National Priorities List sites as of September, 2019 is 1,336. The number of non-federal sites in FEMA's highest flood hazard category 530.55 / the total number of National Priorities List sites 1,336 = .3967 or 39.57%
